

Mission Template Guide — Home Space Observatory

Objective

Create new missions by duplicating an existing structure and only changing content.

Folder Structure

missions/mission001/index.html
missions/mission002/index.html
assets/img/missions/mission001/
assets/img/missions/mission002/

Steps to Create a New Mission

1. Duplicate mission001 folder to mission002.
2. Keep file name as index.html.
3. Create matching image folder under assets/img/missions/mission002.
4. Add new images.

What to Change in HTML

1. Page title (Mission number and name).
2. Header (MISSION 002, mission name).
3. Summary description.
4. Metadata (Phase, Status, Target, Constellation).
5. Image paths: replace mission001 with mission002.
6. Capture data values.
7. Process and Conclusion text.

Important Rules

- Do NOT change CSS paths.
- Reuse the same layout.
- Keep naming consistent.

Linking from Homepage

`<a href='missions/mission002/index.html'>View mission</a>`

Best Practice

Treat each mission as a documented process: capture → process → validate → conclude.
